### **FIRST ROLL-OUT OF SCORPIUS SR-S LAUNCHER**

Microcosm successfully completed the initial roll-out tests of the Scorpius SR-S single-engine rocket, the first of the Scorpius rocket family. It demonstrates the Scorpius low-cost concept. The test of the flight hardware simulated actual launch operations, including raising the vehicle on the erector launcher.

Scorpius vehicles will change the face of domestic launch services in the United States. Its capabilities will provide low-cost launch capacity for both the commercial and military sectors. The initial SR-S launch is scheduled for July in White Sands, New Mexico.

The program is funded by Microcosm internal R&D and multiple contracts from the U.S. Air Force Research Laboratory and NASA.
